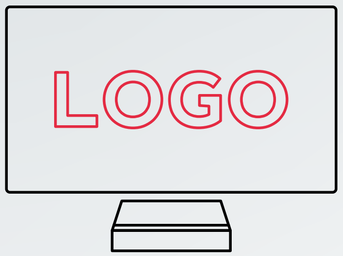
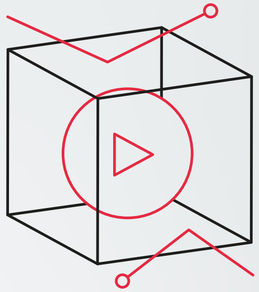
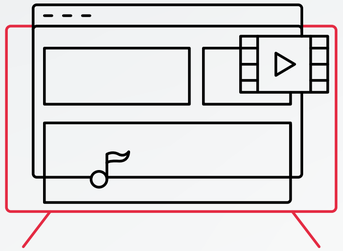
Software customization options



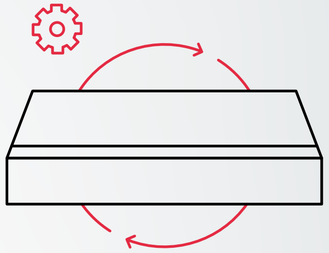
UI branding



Protection for your service



Unique service configuration



Configuration and administration

UI branding

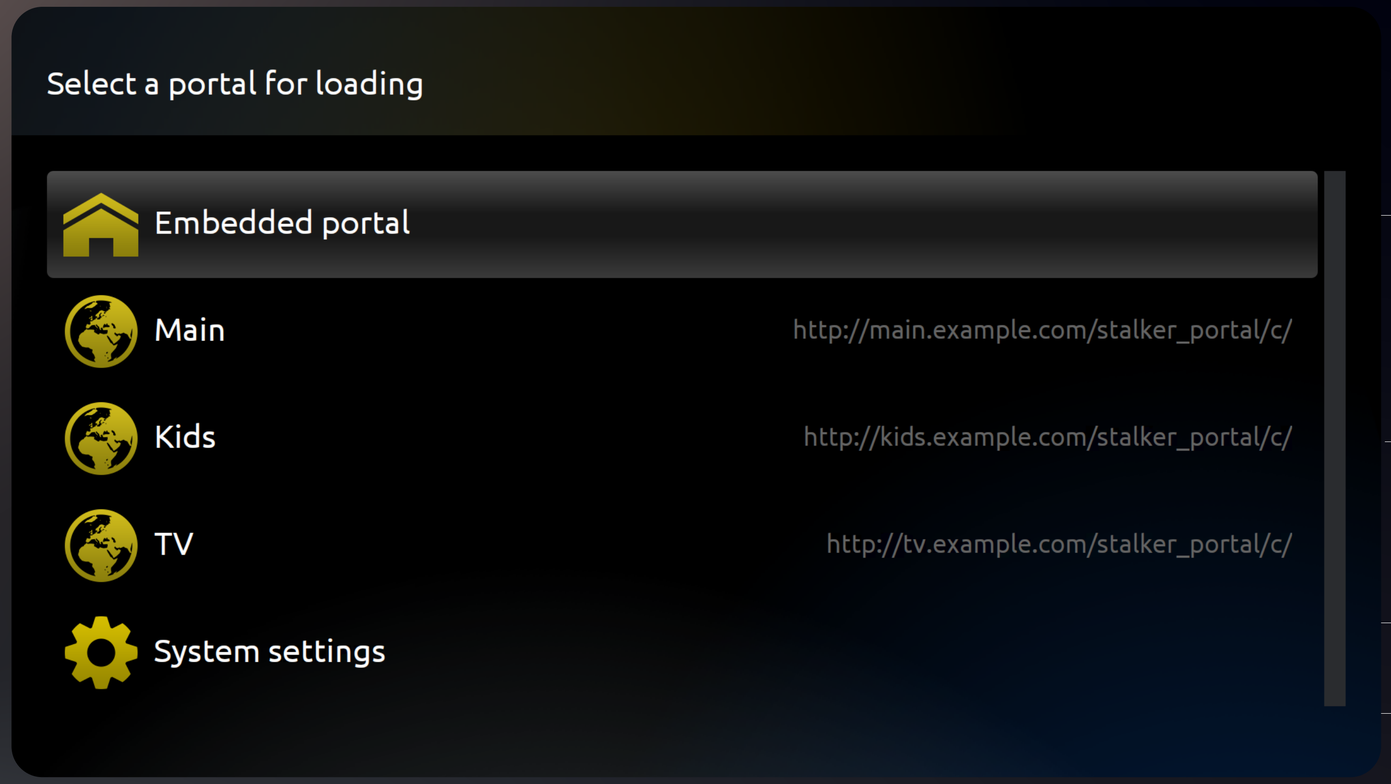
Loading screen. Make full use of STB software customization to feature your service logo on the loading screen. Your logo and service name will be the first thing users see when turning on the device.

UI branding

Default portal selection. Customization enables operators to display several additional portals on the main screen:

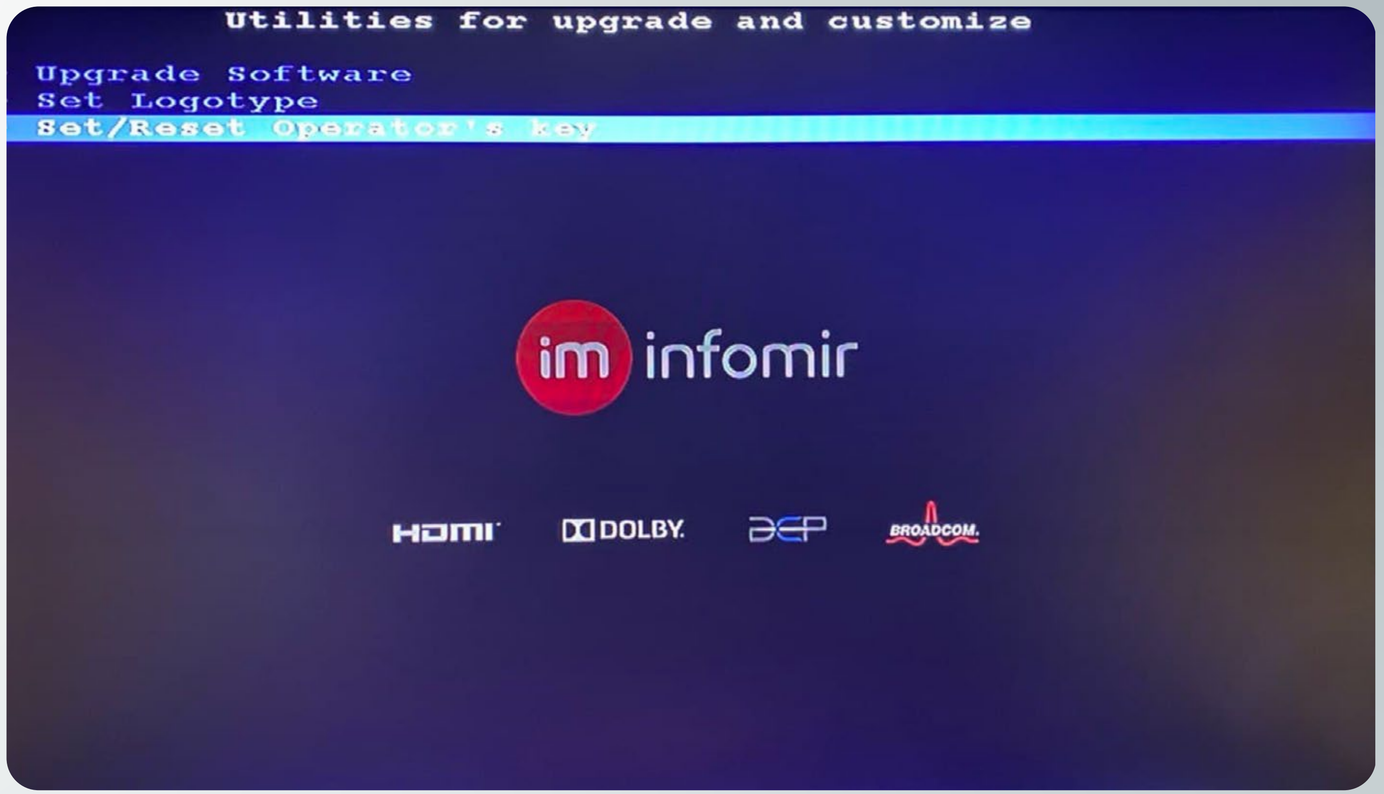
- Main portal
- Children's portal
- Streaming TV portal

This feature allows you to select one as a default.



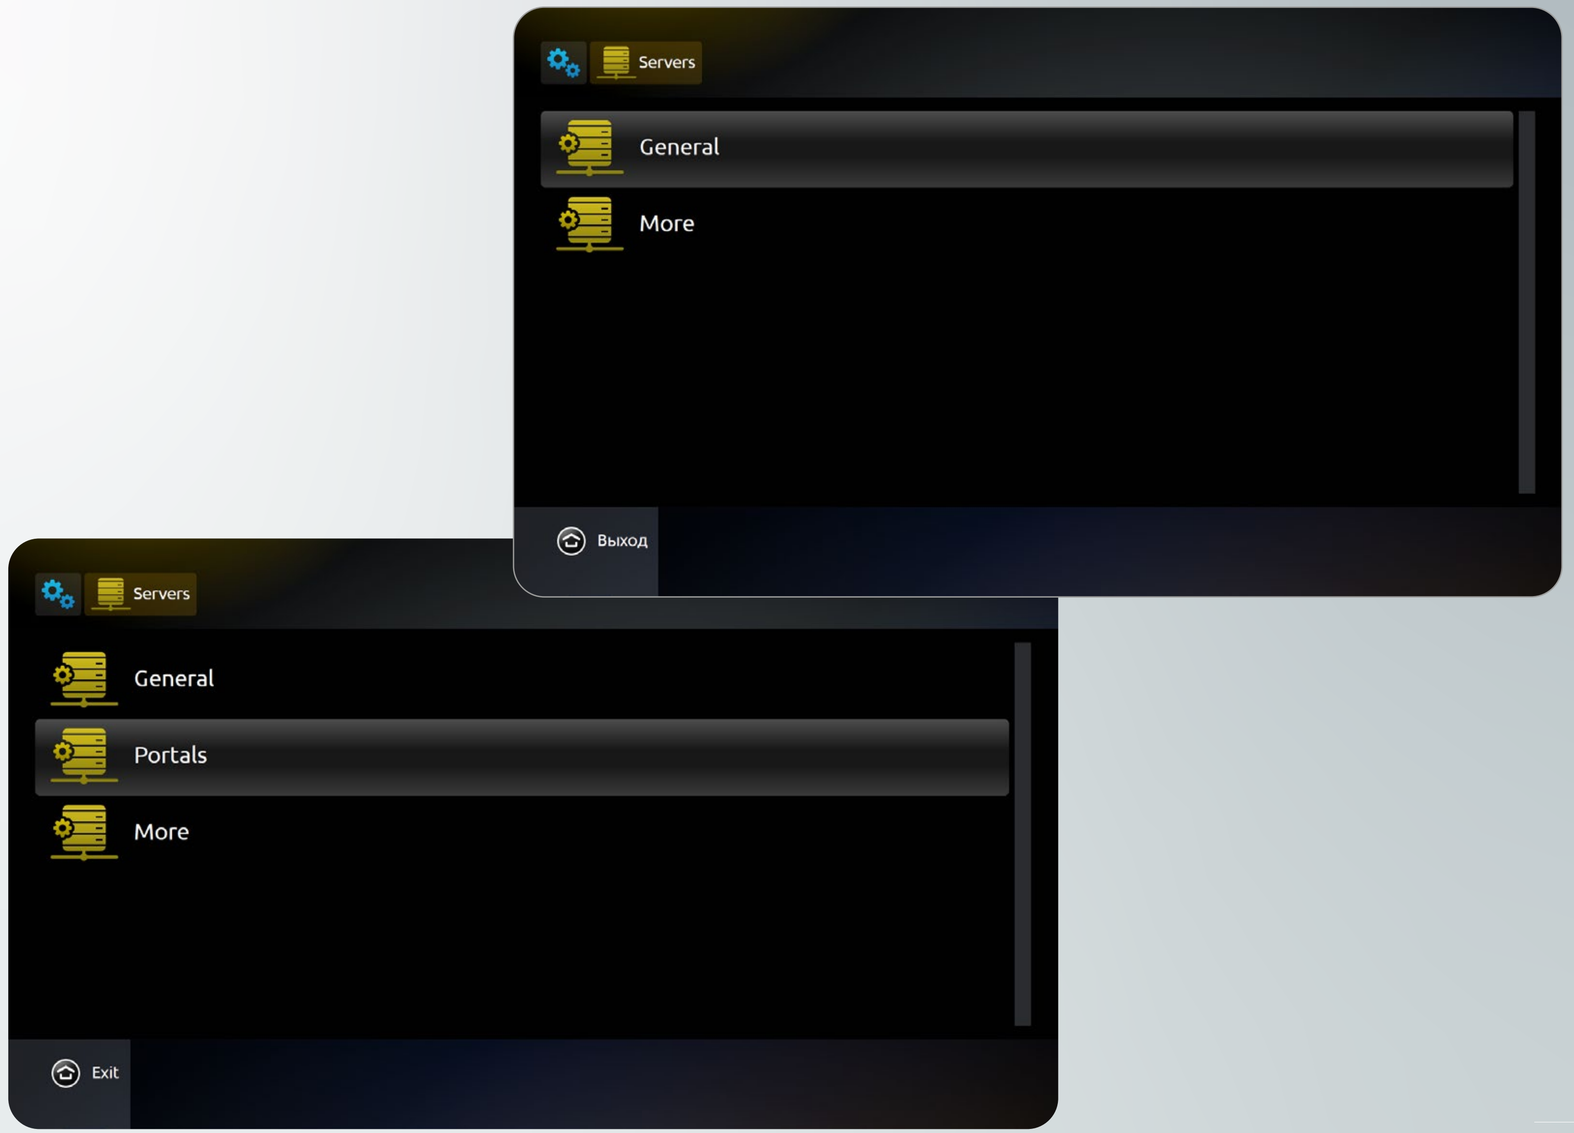
Protection for your service

Software reset and reinstallation. Protect your devices from third-party interference, e.g., resetting settings or replacing custom firmware. Such options are available only when operators enter a special key.



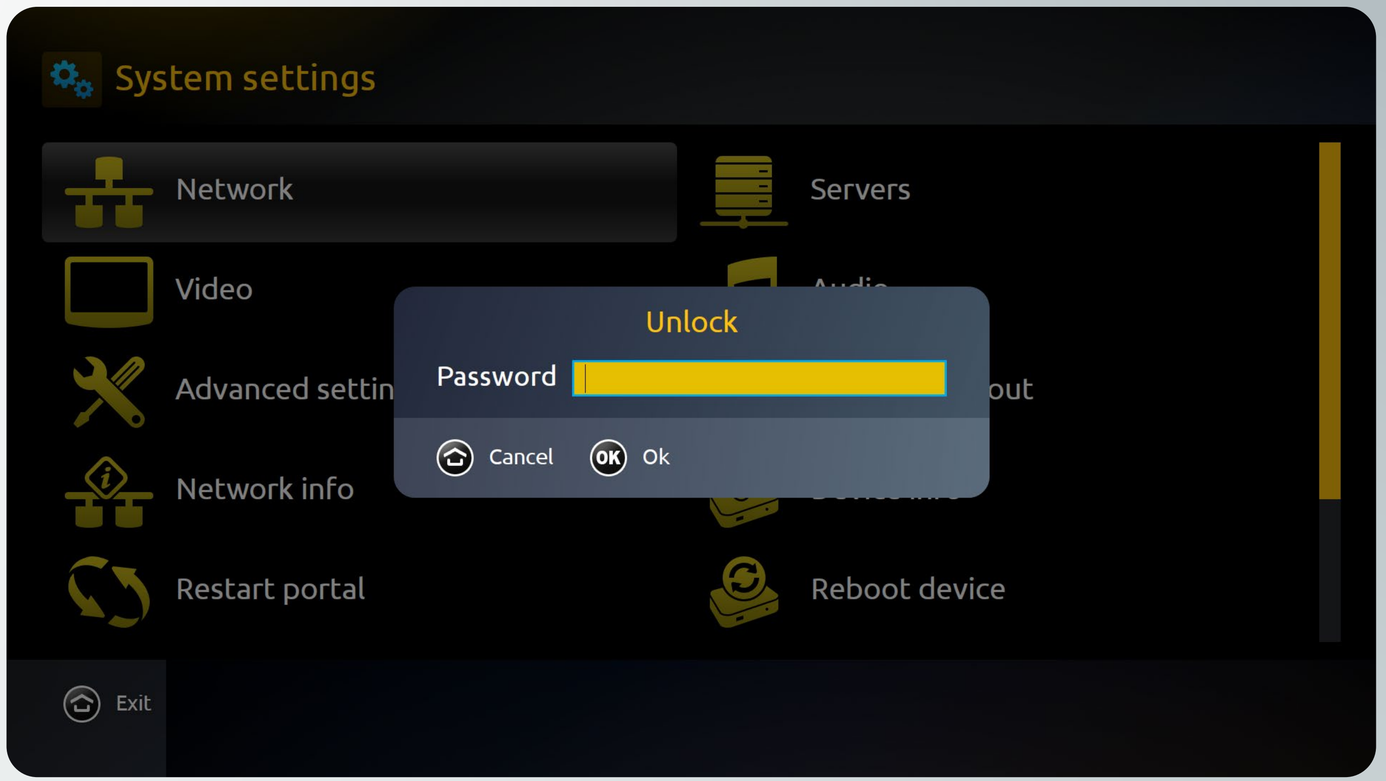
Protection for your service

Portal URL. Restrict access to prevent third-party portals from being added to the menu. Users with such set-top boxes can only use the operator's service.



Protection for your service

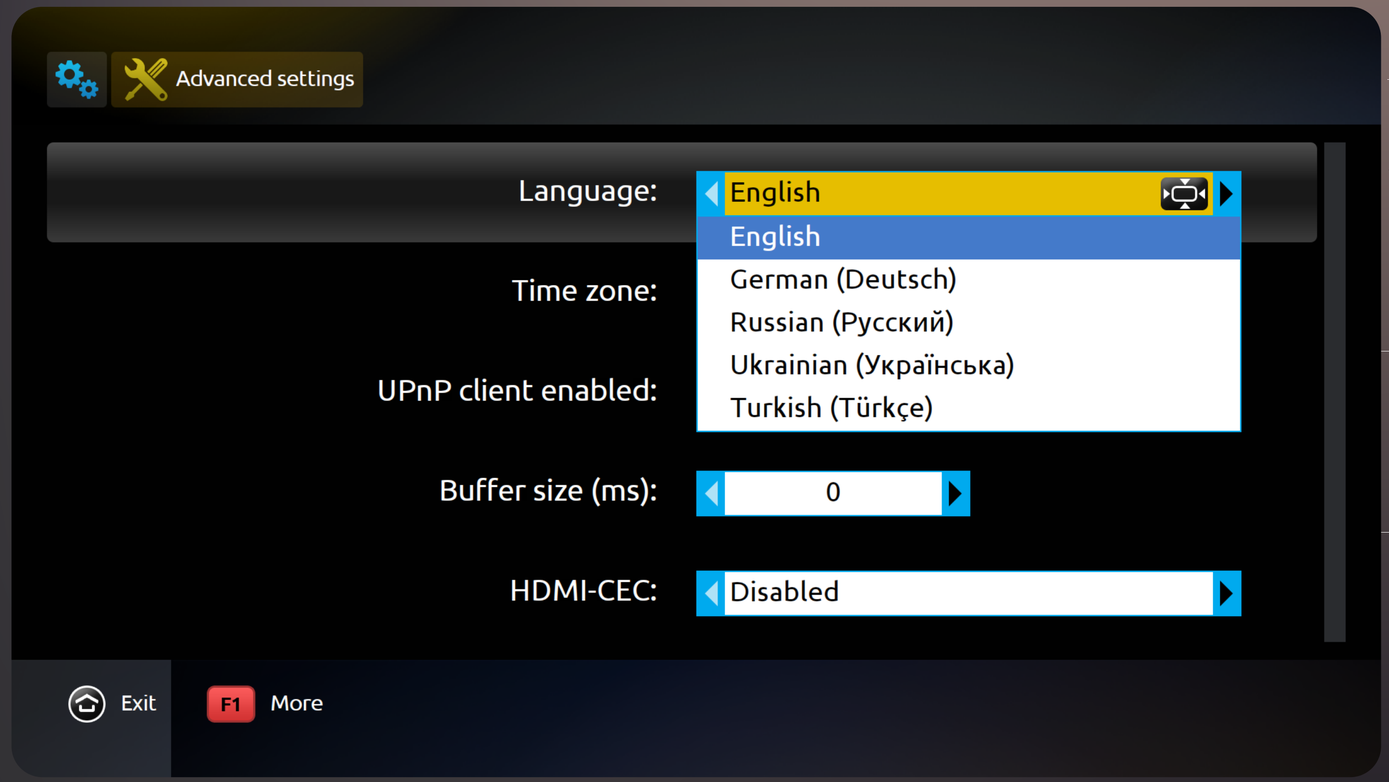
Access to STB system settings.
Users cannot change the device options and impair its performance. This way, we reduce the technical support load and make sure devices operate seamlessly.



infomir

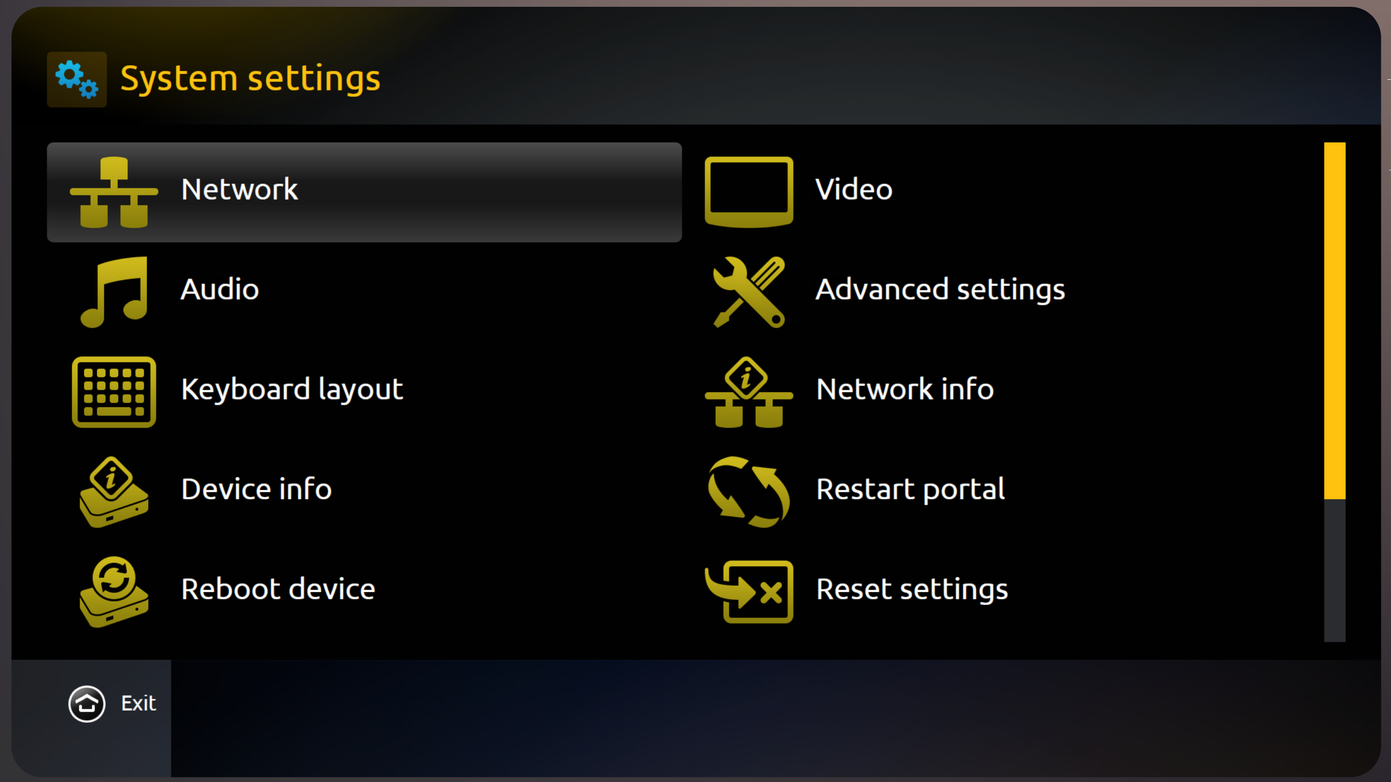
Unique service configuration

UI localization. You can have the device UI localized when building its firmware. Your devices will offer the right language out of the box.



Unique service configuration

Creation of a unique internal UI.
With customization, operators can hide any integrated portal elements.



Configuration and administration

Easy deployment for all set-top boxes.
Our reliable technical support is always ready to help operators.

Update management.
Update the device firmware at any time. We can set up and send updates from the operator's server.

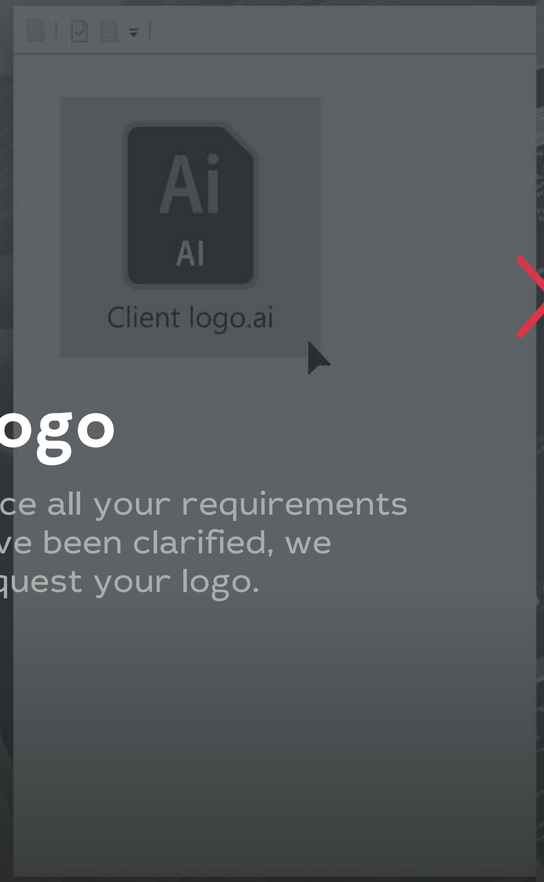
Customization step by step

Briefing and terms of reference

We discuss all your STB customization needs and agree on additional suggestions.

Order customization



Logo

Once all your requirements have been clarified, we request your logo.

Software

Our developers customize device firmware as per your requirements.

Installation

We upload custom software to client devices. We test your devices and ensure their compatibility with your service.
